Hour reading on the paint booth:	

Paint booths/spray booths are power-vented structures that enclose a spraying operation to confine and limit vapor and spray through exhaust systems. When working in a paint booth, it's crucial to be aware of potential hazards to ensure safety. Here are some important warnings and precautions:

1. Flammable Materials: Paints, solvents, and coatings used in the booth are often flammable. Proper handling and storage are essential to prevent fires or explosions.
2. Prohibit flames, and sparks within 20 feet of the booth.
3. Toxic Exposure: Paints and solvents contain toxic substances and require special handling and PPE
4. Electrical extension cords should **not** be used inside the paint booth.

Please answer the following questions:	Yes	No (or N/A)
Have you done respirator fit testing?		
Are you using a respirator? What type _____		
Are you wearing eye protection?		
MSDS provided?		
Will you be using a heating cycle? If so, how long _____		
Will you be wearing body covering?		

Please sign below to indicate that you understand the hazards involved with using the paint booth and that you will conduct yourself in a professional manner.
